

Synergy and CorasWorks Announce Product Compatibility

Combination of Synergy's Replicator 3.0 and CorasWorks Workplace Suite v10 and AppEngine for SharePoint Delivers Powerful Enterprise Solution for SharePoint™

La Jolla, CA and Reston, VA – September 17, 2009 – Synergy Inc and CorasWorks Corporation announced product initiatives designed to meet the real-time data performance requirements of enterprise Microsoft® SharePoint™ organizations. Synergy has successfully completed compatibility testing between its Replicator 3.0 product, a leading bi-directional server replication software solution for SharePoint, and two of CorasWorks' major SharePoint-related products—the Workplace Suite v10 and the AppEngine for SharePoint.

Replicator is a back end, web-based platform used to synchronize and manage Business Intelligence in real-time across a wide area SharePoint server environment. With Replicator, customers can securely share selected documents between logically separate environments and ensure uninterrupted data access and continuous operations in the event of a disaster or system failure. The CorasWorks Workplace Suite v10 is an application development tool that enables organizations to design, build and manage applications in SharePoint without the costs and complexity of custom code development. The AppEngine for SharePoint is an innovative runtime environment that enables users to download and run plug-and-play apps on the SharePoint platform.

“Replicator enables federal and enterprise clients to address the challenges of accessing SharePoint data caused by low bandwidth and network latency to improve branch office performance globally,” says VP of SharePoint Technologies at Synergy, David Seaman, “By working closely with CorasWorks, we are able to offer customers a completely bi-directional replication solution that makes both SharePoint and the power of the Workplace Suite and AppEngine for SharePoint available in real-time to end users all over the world.”

“We have many large, global customers in both the private and public sectors that have leveraged our software to build enterprise-wide applications on SharePoint,” said Gary Voight, President and CEO of CorasWorks. “These customers all have the same need to access their applications and information in real time from across their multiple locations. With Synergy's Replicator 3.0, we can now be assured that our customers can have that access.”

To learn more about Synergy's Replicator and the CorasWorks Workplace Suite v10 and AppEngine for SharePoint, attend one of two free, live Webcasts on October 7, 2009 at 14:00 GMT/9am EDT or 2pm EDT: **Accessing Your SharePoint Data from Anywhere, Anytime**. You can register for either webcast at www.corasworks.net/corasworks-synergy.

About CorasWorks

With more than 1,000 customers and more than 1 million users worldwide, CorasWorks is a leading provider of modular application development software for Microsoft SharePoint. Customers use CorasWorks products to build web-based solutions such as project- and process-oriented solutions and line of business applications. Its modular architecture makes it easy to design, build, and manage an integrated workplace of collaborative business applications, without the time and expense of custom development.

About Synergy
