

# Extranet Secure

## PROVIDE ENHANCED SECURITY FOR YOUR EXTRANET WEBSITE

### Secure your Livelink® Extranet site with enhanced security.

Extranet Secure creates enhanced security by limiting users within a single project or folder structure once they login to Livelink®. Security is further enhanced by automatically reducing menu selections.

Extranet Secure improves the Livelink® experience for users by automatically placing them in a specific folder or project once they login, eliminating the need for them to navigate the Enterprise tree. User navigation is limited to the current folder or project structure, providing extra security on top of normal permission based security. Search is limited to "From Here Down" removing the chance of users finding "Enterprise" documents outside of their area. The basic Livelink® menu options have been restricted to basic functionality which provides additional security for user and groups, searching and navigation. In addition, this module provides fully dynamic configuration of user and group to project/folder relationships.

#### Specifications

|           |   |
|-----------|---|
| Browsers  | All standard browsers                       |
| Servers   | Livelink® Version 9.x on UNIX® and Windows® |
| Databases | Oracle®, SQL*Server®                        |

#### Key Features

- Automatic placement after user login
- Confined navigation
- Limited search options
- Restricted menu options
- Dynamic configuration of user and group login navigation areas

#### Benefits

##### Increase security

Limits users within a single project or folder structure once they login to Livelink®. For added security, Livelink® menu options can be restricted to basic functionality for user and groups.

##### Improve user experience

Automatic navigation places user into a specific folder or project at login eliminating the need to navigate the Enterprise tree.
